

“HYDRO” ROLLER WASHER (RECIRCULATION)

Code 550/08V

CHARACTERISTICS	<p>“HYDRO” roller washer, 550/08V, is a product mainly used for the washing of flexographic machine printing with water-based inks. This roller washer, for its alkaline nature, resolubilizes the components of the ink, removing incrustations from ducts and roller cavities. It is suitable for the cleaning of recirculation pumps as it is not a foamer product.</p>
INSTRUCTIONS FOR USE	<p>After taken away the ink from the printing machine inkwell and washed it with water, put the “LAVARULLI HYDRO” in the inkwell (pure or diluted with water in a ratio 1:1). As it is not a foamer product, it may circulate in the ducts too: at the end of this process, rinse out with water. The “LAVARULLI HYDRO” is compatible with water-based ink and so it tolerates washing residuals. For cliché washing, dilute the product copiously with water and spray it on the dirty part directly.</p>
SECURITY DEVICES	<p>Wear always rubber gloves and protective glasses during application. In case of skin contact with the product, wash with abundant water; don't keep on wearing clothes contaminated by this product.</p>
TECHNICAL NOTES	<p>Aspect: Colourless solution pH: alkaline</p>
EXPIRY DATE AND STORAGE	<p>The quality of the product is ensured for 12 months from the manufacture date with the product kept in the original sealed containers. A storage temperature superior than 0°C is suggested.</p>
STANDARD PACKAGING	<p>Tanks 5, 10 and 20 lt.</p>

*The aim of these technical data sheets is to inform the customers about our products, but they can not include all printing situations.
For this reason the particularities of all printing processes must be considered before use of the described products and we suggest to contact us for further informations.*
