

“KARTAPE” INKS

series 467

PRINT TYPE	Flexographic.
MAIN SUBSTRATE	Paper adhesive tapes.
RECOMMENDED THINNERS	Water; Water/Alcohol Mixture (when a dry speed increase is required).
CLICHE'	Photopolymeric clichè can be used which have Water/Alcohol mixture fastness or butyl rubber rollers.
FEATURES	Water based inks with medium viscosity, good printability and rubbing resistance. If the printing surface is not wide, the Release overprinting is not requested.
NOTES	We recommend not allowing the ink to get dry on the rolls. If necessary, we suggest using our detergent solution “LAVARULLI”, code 710/08.
EXPIRY DATE AND STORAGE	The quality of the product is ensured for 12 months from the manufacture date with the product kept in the original sealed containers. A storage temperature between 1° and 35°C is suggested.
STANDARD PACKAGING	Pails 25 Kg; drums 200 Kg

The aim of these technical data sheets is to inform the customers about our products, but they can not include all printing situations. For this reason the particularities of all printing processes must be considered before use of the described products and we suggest to contact us for further informations.
